Typical Sanitary Sewer Service

1. Sewer Main - The sewer main is located in the street and typically PVC or clay tile
2. Sewer Lateral - The smallest sewer lateral meeting code is a 4-inch diameter PVC pipe
3. Curb Clean-Out - The sewer clean-out is typically located in the street right-of-way. It allows city crews to clean the street side of the lateral in the event of a blockage. It is the property owner's responsibility to make sure that the clean-out is always visible and accessible. Some older homes may not have a clean-out
4. Clean-Out - Typically located near the foundation wall. This clean-out allows access to the sewer lateral from the house to the curb clean-out
5. Trap - The trap prevents any gases in the sewer from backing up into the building
6. Vent - The vent lets fresh air into the sewer lateral, preventing a vacuum condition where water might back up
7. Connection to Building Drain
8. Right of Way
9. Responsibility of Property Owner - The property owner is responsible for maintaining the Curb Clean-Out (See #4) and all piping from the curb clean-out to the house
10. Responsibility of the City - Once the sewer service is brought up to code (Minimum 4-inch diameter PVC pipe with a clean-out at the curb), the city is responsible for all maintenance and repairs from the main in the street to the curb clean-out.
